

Are your preventive maintenance efforts wrenching away precious resources?

Time to listen to your machines.

Most companies are aware of waste in their preventive maintenance efforts, but aren't quite sure how to eliminate it.

Listen to your machines!

40%

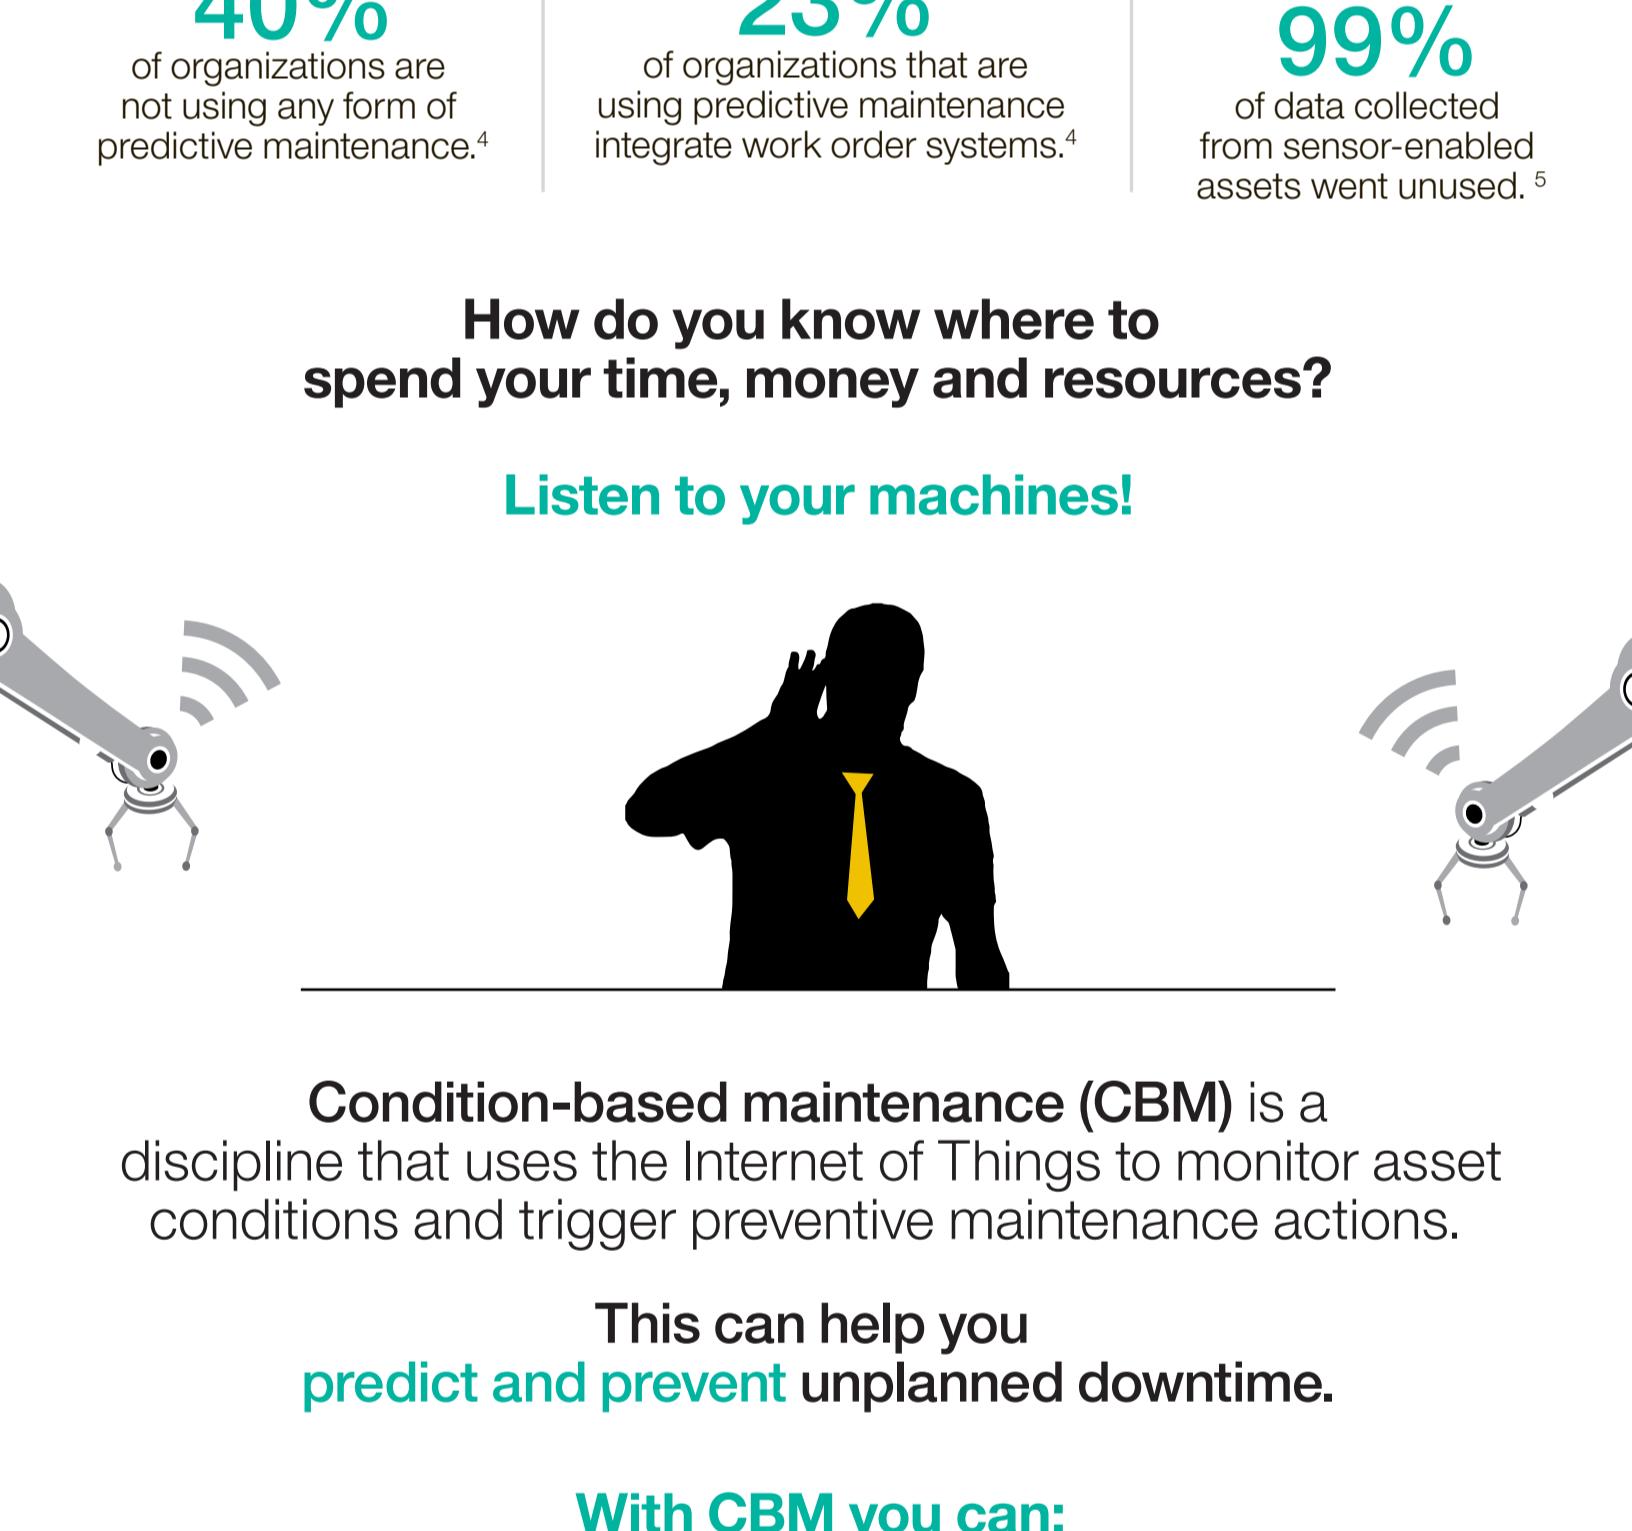

of preventive maintenance costs are spent on assets with negligible affect on uptime failure¹

30%

of preventive maintenance activities are carried out too frequently¹

45%

of all maintenance efforts are ineffective²

Only 18% of assets have an age related failure pattern³

82% of asset failures appear random³

Traditional preventive maintenance embraces a time based approach.

This consumes unnecessary resources and may actually cause failure by disrupting the equilibrium of stable assets.³

A full 40%

of organizations are not using any form of predictive maintenance.⁴

Only 23%

of organizations that are using predictive maintenance integrate work order systems.⁴

For example, on one oil rig

99%

of data collected from sensor-enabled assets went unused.⁵

How do you know where to spend your time, money and resources?

Listen to your machines!

Condition-based maintenance (CBM) is a discipline that uses the Internet of Things to monitor asset conditions and trigger preventive maintenance actions.

This can help you predict and prevent unplanned downtime.

With CBM you can:

Monitor and analyze asset health data, both historical and real-time

Intervene at the right time, before assets go down

Prioritize and optimize resources

Reduce maintenance costs by up to 25%⁶

Eliminate up to 70% of breakdowns⁷

Reduce downtime by up to 50%⁵

Cut unplanned outages by up to 50%⁶

Reduce scheduled repairs by up to 12%⁷

Reduce capital investment by 3-5%⁵

The results speak for themselves.

Total spend on preventive maintenance can be reduced by up to

50%⁴

Total preventative maintenance hours can be reduced by⁸

50% to 70%

Your machines are talking. Are you listening?
